

GLOBAL ERP

Global ERP **Global ERP Software Overview:**

Global ERP Software is an integrated suite of robust business modules that work synergistically to help you maximize operational efficiency and increase productivity and profitability across every aspect of your enterprise. These scalable applications feature advanced capabilities that address many of the daily operational challenges you face, while providing the big picture management insights you need to secure your company's successful future. Streamlined automation, exceptional functionality, extensive customization capabilities, and easy integration with popular desktop productivity tools and the Internet are just a few of its strengths. Now you can leverage the power of one software company to meet all your software needs. And you have the added convenience and peace of mind that comes with knowing you can count on the superior quality, reliability, and award-winning customer support services of Global Software.

Global ERP Financials

General Ledger

The General Ledger provides quick access and easy manipulation of mission-critical data. You can process inter-company transactions, establish flexible accounting periods and an unlimited number of budgets, perform future posting and more. With its financial report writer, you can set up and maintain a variety of sophisticated reports so decisions are always based on the insight gained from in-depth analysis.

Accounts Receivable

Accounts Receivable improves your cash flow and enhances customer satisfaction with streamlined automation of your collections process. Gain complete control of your receivables and invoicing processes, and add automatic calculations to your procedures to avoid errors and duplicate entry. Consolidate customer receivables, statements, reporting, and credit checking across national accounts.

Accounts Payable

Accounts Payable offers several options to streamline your approval process, automate vendor-related tasks, and simplify voucher entry. It also accommodates multi-year history retention, check printing, and more.

Advanced Consolidations

Advanced Consolidations gathers and groups financial data from every entity in your organization. This data can then be quickly formatted into periodic, quarterly, and annual reports, or can present multiple companies as one legal entity. Its flexibility in working with multiple charts of accounts and ledgers makes this a valuable tool for consolidating and analyzing your financials.

Advanced Allocations

Advanced Allocations eliminates the guesswork in distributing company expenses. It helps you reduce administrative time and costs while accurately measuring resource consumption. Built-in process controls help you eliminate errors by creating allocation rules while providing the flexibility to distribute and re-distribute allocations for new and existing accrued transactions.

Global ERP Fixed Asset Accounting

Fixed Asset Accounting accounts for your company's tangible assets (laptops, copiers, production machines, and other business equipment), automatically calculating depreciation and tax deductions, eliminating the need for off-line spreadsheets.

Cash Management

Cash Management enables you to quickly and accurately reconcile all of your bank accounts, as well as perform bank transactions with pinpoint accuracy and secure record keeping that flows through your entire system.

Multicurrency Management

Multicurrency Management provides robust multicurrency and analysis capabilities so you can optimize your international opportunities. You can maintain an unlimited number of currencies and exchange rate schedules, update exchange rates daily, and post realized and unrealized gains or losses due to currency fluctuations.

Purchase Order

Even businesses that don't manage warehouses can benefit from the advanced tracking capabilities of the Purchase Order module. You can monitor the purchase of office equipment, consumables, and catch under-shipments from your vendors. It's just another way to streamline operations and improve your cash flow.

Global ERP Project Accounting

Track actual vs. estimated costs through forecast completion. Adjust estimated budget to increase forecast accuracy at any point through the project lifecycle. Designate the most appropriate project type— time and materials, fixed price, or a combination of the two and eliminate the extra costs of maintaining multiple tracking systems. Capitalise on IRS OR GAAP -compliant reporting standards. Maximize project profitability with the insight you gain from these sophisticated time and expense tracking tools

Global ERP Time-Sheet

Time and expense entry can be deployed through networked clients or connecting your remote workforce on a real-time basis. Project managers and supervisors can check project status and profit points at anytime, from anywhere, while remote workers are assured that their time and expenses are accurately entered and tracked.

Global ERP Distribution

Inventory Management

With its warehouse-centric design, the Inventory Management module can save you time and money. You can track costs and sales histories by warehouse and manage assemble-to-order or build-to-order kits. You also retain complete inventory visibility by tracking your stock transfers both within and between warehouses. Down time turns into up time since you'll be able to take orders during inventory cycle counting. You can even attach images to inventory items and organize your products into a comprehensive catalogue which translates to easy item lookup in both the Sales Order and Purchase Order modules, as well as online through eCustomer and eSalesforce. Inventory Management fully supports raw material and finished goods lot control and serial number tracking in addition to physical inventory counts.

Inventory Replenishment

This sophisticated module gives you the insight to maximize your profits by finding the optimal balance between accelerating inventory turnaround and maintaining adequate stock levels to meet customer demand. Inventory Replenishment features demand forecasting and automated procurement capabilities, which enable you to automatically generate purchase orders and warehouse transfers based on your inventory requirements. By tracking overhead costs and optimal purchase levels for vendors, you can combine orders so that you receive maximum discounts from your vendors as you minimize your overhead costs. Inventory Replenishment utilizes seasonal cycles, sales history, and lead times to forecast the appropriate inventory levels and minimize carrying costs.

Warehouse Management

Manage inventory movement within your physical warehouse and between warehouses using built-in three-step inventory transfers. Inventory can also be assigned to a dedicated or random bin and tracked by location for wave and zone picking methods. Warehouse Management provides real-time inventory visibility for companies with large inventories or multiple warehouse locations.

Purchase Order

The Purchase Order module helps you manage the requisition, purchase, and physical receipt of items and services. You can tag incoming product against customer sales orders so that as product is received, it is immediately designated to customer back orders. In addition, manufacturers can accurately track material and outside process costs by tagging a purchase order line to a specific work order operation. You can also verify payable invoices by matching the delivery receipt with the invoice and the original purchase order. Tighter tracking and more accurate purchasing control within your warehouse means greater cost efficiency and ultimately a better bottom line.

Sales Order

The flexibility of the Sales Orders enables you to price inventory items based on customer class, location, discounts, and more. Sales Order streamlines data entry and accommodates multiple currencies for easy entry into global markets and unsurpassed pricing flexibility. Real-time visibility enables you to confirm stock availability, or if out of stock, source from another warehouse, drop-ship, create work orders, or substitute other items.

Advanced Kitting

The Inventory Management module provides the ability to stock and ship assembled kits as well as sell build to order kits based on material templates. The Advanced Kitting module takes this a step further by incorporating labour costs into the kitting process and creating routings within the components.

Global ERP Manufacturing

Advanced Manufacturing

Advanced Manufacturing is especially well-suited for all manufacturing and assembly where work order tracking and labour reporting are essential. The system features shop floor visibility to your entire enterprise. IRS or GAAP compliant job costing gives you insight regarding your most profitable and costly jobs. Operations, machines, work centres, and other

options may be defined to accommodate your unique manufacturing requirements. Advanced Manufacturing also supports co-products, by-products, disassembly, and outside process tracking.

Engineering Change Management

A routing/bill of material may be placed under engineering change management control to track any changes made to the production standards. Members of predefined user groups are notified by e-mail when a change is made to a controlled routing/bill of material.

Estimating

Internal product structure and cost estimates are quickly created from scratch or copied from an existing routing/bill of material, estimates, or work orders. Final estimates may be converted directly into a quote, sales order, or production routing/bill of material. Engineers can estimate multiple quantities with different mark-ups to amortize setup and one-time costs across multiple quantities. Estimates may include labour, material, subcontracted operations, prototyping, special tooling, and other costs.

Material Requirements Planning

MRP is integrated with finite scheduling to provide a true closed loop system, which utilizes actual demand and transaction data from sales orders, purchase orders, inventory management, project accounting estimates, and work orders. It also provides integration with demand forecasts for items based on advanced replenishment rules and formulas, thus enabling more accurate material plans by item. Planners have total control over generation criteria including start and stop dates, planning bucket sizes, and a demand time fence. Multiple MRP versions provide greater flexibility and simulation/comparison capabilities. MRP may be instantly accessed for material data from sales orders, purchase orders, work orders, and inventory.

Shop Floor Control

Designed for use with bar, the shop floor control system can run on a terminal or from many handheld or terminal devices. Shop Floor Control features start and stop job entry, work order inquiry, material/outside/other issues entry, receipt of goods entry, labour assignments, and access to other essential shop floor activities.

Global ERP Customer Relationship Management (CRM)

Global ERP Customer Relationship Management (CRM) has front office capabilities and back office integration they need to cultivate positive customer relationships and profitable results. Streamlined company communications and improved customer relations all translate to a shorter sales cycle, higher sales revenue, and increased profits.

CRM Sales Logic

This solution manages all aspects of prospecting and Customer contact providing you with real time information for all relevant staff members.

Executive Reporting

Empowers management to review top level financial and performance information through key performance indicators—anytime, anywhere, so all enterprise decisions can be made with the insight gleaned from real-time business intelligence.

Business Intelligence & Reporting

Crystal Reports MSSQL Reporting Services

This powerful report writer helps you create, format, and print presentation quality reports that reveal the business insights behind the numbers.
